Software Release Version

This version of software is Tagged with version **SE_FW_1.101.0**

Component	DEV Version
SERAM (Secure Enclave Random Accesses Memory)	V1.101.0
SEROM (Secure Enclave Read Only Memory)	V1.1010
PLL_REV_B0	V0.0.4

Please see Version String in this release note.

Please see Release Known Limitations and Issues in this release note.

Please see Release Feature Specifics for details of all changes in this release.

New Features in this Release

- SES Implemented proper initialization of the internal CMAC contexts, which allows the CMAC functions to execute correctly.
- Host MHU Secure firewall config
- SETOOLS gen-toc.py handling unsigned SERAM images.
- SETOOLS Full UPD packages are now in the app-release.

Updates / Fixes this Release

- INTERNAL ARM Compiler updates for switch.
- SERVICES
 - o SERVICES Version: 0.50.1
 - Contributed power examples updates.
 - o Documentation update on SERVICES_boot_process_toc_entry() and use of DEFERRED.
 - Documentation update on SERVICES_system_get_toc_version() which is a deprecated function.

- BUG FIXES:

- o [JIRA] (SE-2830) [SETOOLs] Firmware version is not getting updated in the TOC table
- [JIRA] (SE-2808) [SETOOLS] Few of the screenshots need to be added in the SETOOLS documentation
- o [JIRA] (SE-2826) [SERVICES] app-device-config.json is not copied by 'make install'
- o [JIRA] (SE-2818) [BOLT][aiPM] Chip/Application does not wake up after STOP mode
- [JIRA] (SE-2816) [BOLT][aiPM] Firewall Exception when PD5 is Off and wakes up without interrupt set from M55
- [JIRA] (SE-2811) [SETOOLS] gen-toc.py allocates the same SERAM bank when the same binary is specified
- [JIRA] (SE-2804) [SERVICES] Bounds Test shows random service response code with armclang
- o [JIRA] (SE-2803) [SERAM] E1C UPD unsigned image causes recovery mode
- o [JIRA] (SE-2638) [SETOOLS][REV_B2] Trace marker for READ SOC_ID is not consistent
- o [JIRA] (SE-2798) [SERAM] Cold wake up bit left ON
- [JIRA] (SE-2848) [REV-B4][SETOOLS] Override SOC_ID trace is seen in both SERAM and SEROM trace data
- o [JIRA] (SE-2711) [SERAM] Storage address is not shown in SEUART for Deferred images
- o [JIRA] (SE-2611) [SERAM] Trace entries must be voided before rolling over buffer
- o [JIRA] (SE-2565) [SETOOLS][REV B3] OTP Mfr Data decode

Removed / Deprecated in this Release.

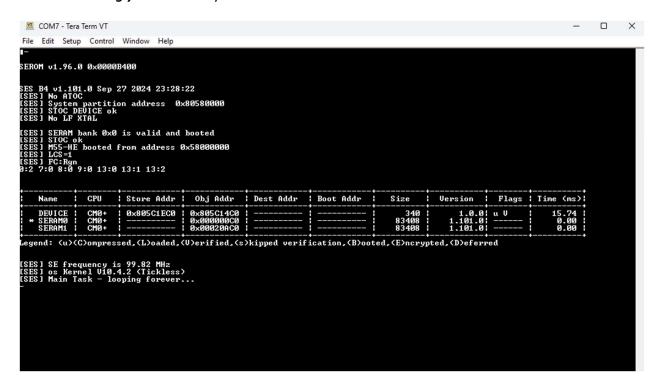

- <>

Release Output

SE UART output:

NOTE: We *strongly* recommend you have the SE-UART connected.

The version of SES is always printed (see above). See Developer Mode / Version String for alternative methods of finding the SES version.

[SEROM] Device ID	Shows the device ID as returned from the soc_id register.
[SES] LCS	Life Cycle State (0 = CM, 5 = DM, 7 = Secure)
[SES] System partition	Where does the STOC start in MRAM.
[SES] STOC Part# match	Error code checking Device part# with the image build.
[SES] System partition	Error code from processing STOC or OK
[SES] Application partition	Error code from processing ATOC or OK

Release Known Limitations and Issues

Features Not implemented.

[JIRA] (SE-1827) [SERAM] Security Settings	DCT "Misc" Page for SE
[JIRA] (SE-1082) [SESW] OTA Strategy	OTA update strategy. Stage#3 (Partial) TBD
A32 bare metal SERVICES	This is not supported in CMSIS
LINUX SERVICES	Linux based SERVICE library

BUGS - Ensemble

SE-2868	[BOLT-B4][aiPM] Hard fault with BASIC4 demo application for STOP mode	aiPM	
SE-2821	Hard fault on SERAM resume from standby when MRAM header switch is off		
SE-2665	SRAM(s) not powered up when waking up from stop mode (v1.96.0)		
SE-2663	HP core never wakes up from stop if wake up interrupt happens during the		
	stop sequence		
SE-2599	[aiPM] If both M55 cores set ip_clock_gating to zero, then (NPU_HP_MASK	aiPM	
	NPU_HE_MASK LP_PERIPH_MASK) can't be turned on		
SE-2347	[aiPM] Incomplete logs with STOP mode test application (aiPM	
	services_aipm_stop_modes)		
SE-2346	[aiPM] Incomplete logs with READY mode application	aiPM	
SE-2333	[aiPM] HP is not going to local OFF with GO mode	aiPM	
	application(services_aipm_go_modes) mode-5		
SE-2332	[aiPM] Standby mode application(services_aipm_standby_modes) isn't	aiPM	
	functioning as intended.		
SE-2813	[SERAM] Trace decoder inconsistent	SES	
SE-2803	[SERAM] E1C UPD unsigned image causes recovery mode	SES	
SE-2611	[SERAM] Trace entries must be voided before rolling over buffer	SES	
SE-2277	[SERAM] STOP mode race condition handling		
SE-1936	[SETOOLS] Maintenance / Get MRAM data bounds check failure	SETOOLS	
SE-2867	[BOLT-B4] [Services] UPD image is not getting updated with demo application	SERVICES	
SE-2852	[REV-B3][Services] Target goes into unresponsive when RESET_CPU service_api	SERVICES	
	is ran continuously from TCM		
SE-2845	[services] Using SERVICES_system_get_toc_data API is not giving all the flags in	SERVICES	
	the table		
SE-2844	[Services] Improper functionality of 2 System Management services when	SERVICES	
	given incorrect parameters		
SE-2833	[BOLT] [Services] Deferred image boots up before the	SERVICES	
	SERVICES_boot_process_toc_entry service request		
SE-2815	[SERAM][SERVICES] AES decryption test produces incorrect data	SERVICES	
SE-2549	ETR trace breaks when calling SERVICES_set_run_cfg	SERVICES	
SE-1854	Invalid examples for SERVICES_pinmux and _padcontrol documentation	SERVICES	
SE-1441	[SERVICES] A32 service requests NACKed	SERVICES	
SE-1328	[SERVICES] A32 link register address incorrect	SERVICES

PLL Versions REV BO

Version Number	JIRA	Description
0.0.3		REV_B0 bring up
0.0.2		PLL refactor
0.0.1		First incarnation

The version of the PLL is printed out during the boot up of SERAM.

The initial PLL for REV_BO was based on the one used by DV.

Version 0.0.3

- Extra delay timings added.
- The short delay times did not give the PLL enough window to calibrate itself correctly. It was settling to a bias current code for the Oscillator which was too high.
 - When the PLL loop closes, it tries to force the frequency to 2.4GHz = (38.4M / 2) x 125 by removing some of the current through NMOS device driven by VCO Vcontrol.
 Unfortunately, VCO Vcontrol can't go higher than 0.7V as measured through AMUX_P resulting in PLL CLK been much higher than 2.4GHz.
 - We saw it at 2.9GHz which corresponds to 480MHz with Rev 0.0 SERAM image.
